DSC-560/B INSTALLATION INSTRUCTIONS

This disc fastener is a permanent installation and can be used on plastic, metal, wood, and other materials. A Loctite instant adhesive is used to bond the disc to your equipment. This bond is much more secure than the peel-and-stick foam tape found on other products.

****NOTE** - By attaching to a frequently used stationary workspace, this fastener can be used when you do not have a table leg to wrap the cable around or data hole available for the laptop cable to go through.**

1. Clean the disc and the surface where the disc is to be installed with the enclosed alcohol wipe. Let dry completely. (3-4 min.)
2. Remove the cap and the applicator tip from the tube of adhesive. Then puncture the metal cover of the tube with a paper clip or other sharp object. Replace the applicator tip. THE APPLICATOR TIP HAS A SMALL HOLE - IT IS NOT NECESSARY TO CUT THE TIP.
3. Cover the entire flat surface of the disc with a thin layer of adhesive as shown in the figure above.
4. Place disc on prepared surface and apply gentle pressure to the mated surfaces. Do not move disc until adhesive sets in about 60 seconds.
5. The bond is now strong enough to pass the cable through the fastener with minimal load and tension until the ultimate bond strength is reached in 24 hours.

CAUTION: Read precautions on tube.
