The Scissor Clip is for use in the built-in security slot.
Fits standard slot only.

1. Open the clip in a scissor-like fashion until the tips are on top of each other. This allows the clip to slide into the security slot with ease.
2. Insert the clip into the security slot and close it so that the rubber holes are aligned.

3. You can now pass the security cable through the scissor clip. This prevents the clip from being opened and pulled out of the slot.

4. If needed, use the bracket included if the security cable is too large or the security slot is horizontal. Just thread the bracket through the closed scissor clip, and thread the cable through the bracket.
